

Opportunities for our Future

The significance of national renewable energies

»All households using natural power*
provide a significant contribution to build up a future-qualified energy supply
and by this means support
peace, economy, security, neutrality and ecology.«

* Natural power is generated at 100% with renewable energies (solar, hydro, wind, biomass/gas, geothermal).

SolarPeace.ch

»The old fossil-nuclear energies
(oil, gas, uranium) are limited,
they are far too risky
and due to all side effects
and follow-up costs
far too expensive.«

SolarPeace.ch

» The quantity of radioactivity, which is
present in a reactor, is larger than the
quantity of radioactivity spread by a nuclear
bomb - significantly larger.«

Professor Dr. C F. von Weizsäcker, nuclear physicist

»A (nuclear) reactor in one day produces as much radioactivity
as a 50-kt nuclear explosion.«

Prof. Dr. Richard L. Garwin, nuclear physicist, USA, in his speech »Can the World Do Without Nuclear Power?«,
Nuclear Control Institute, 9.4.2001

This amount of radioactivity
is equivalent with **1460 nuclear bombs** the size of Hiroshima (12.5 kt)
for each nuclear reactor **in each year!**
